

LegendBar Release Checklist

Use this checklist every time you build and release a new version of LegendBar.

Step 1 — Prepare the Build

- ☐ Open the solution in Visual Studio (F:\LegendBar\LegendBar.sln)
- ☐ Switch build configuration to **Release** and platform to **x64** (top toolbar)
- ☐ **Build** → **Clean Solution**
- ☐ **Build** → **Build Solution** — confirm **0 errors** before proceeding
- ☐ Fix any errors before continuing

Step 2 — Update Version Number

- ☐ Open Package.appxmanifest
- ☐ Update the Version attribute in <Identity> :

```
<Identity Version="1.1.X.0" ... />
```

- ☐ Save the file

Step 3 — Create MSIX Package

- ☐ Right-click project → **Package and Publish** → **Create App Packages**
- ☐ Select **Sideload**
- ☐ Select **Yes, select a certificate** → choose your existing .pfx
- ☐ Leave installer location blank → click **Create**
- ☐ On the package configuration screen:
 - ☐ Check **Release** for all architectures (x86, x64, ARM64)
 - ☐ Uncheck **Debug** for all architectures

- ☐ Click **Create** and wait for packaging to complete
- ☐ Confirm output folder exists:

F:\LegendBar\AppPackages\LegendBar_1.1.X.0_Test\

- ☐ Confirm these files exist in the output folder:
 - LegendBar_1.1.X.0_x86_x64_arm64.msixbundle
 - LegendBar_1.1.X.0_x86_x64_arm64.cer

Step 4 — Update Inno Setup Script

Open F:\LegendBar\LegendBarSetup.iss and update the following:

- ☐ Line 2 — version number:

```
#define MyAppVersion "1.1.X.0"
```

- ☐ Line 5 — MSIX bundle path:

```
#define MyMsixBundle "F:\LegendBar\AppPackages\LegendBar_1.1.X.0_Test\LegendBar_1.1.X.0_x86_x64_arm64.msixbundle"
```

- ☐ Line 6 — certificate path:

```
#define MyCertFile "F:\LegendBar\AppPackages\LegendBar_1.1.X.0_Test\LegendBar_1.1.X.0_x86_x64_arm64.cer"
```

- ☐ Step 2 in [Run] — certificate filename:

```
Parameters: "-addstore ""Root"" ""{tmp}\LegendBar_1.1.X.0_x86_x64_arm64.cer"""
```

- ☐ Step 4 in [Run] — MSIX bundle filename:

```
Parameters: "... Add-AppxPackage -Path '{tmp}\LegendBar_1.1.X.0_x86_x64_arm64.msixbundle' ."
```

- ☐ Save the file

Step 5 — Compile Installer

- ☐ Open **Inno Setup Compiler**
- ☐ **File** → **Open** → select `F:\LegendBar\LegendBarSetup.iss`
- ☐ **Build** → **Compile** (or press F9)
- ☐ Confirm **0 errors, 0 warnings**
- ☐ Confirm `F:\LegendBar\Installer\LegendBarSetup.exe` was created/updated

Step 6 — Test the Install

- ☐ Uninstall the previous version:

`Get-AppxPackage *e6524d5f* | Remove-AppxPackage`

- ☐ Run `F:\LegendBar\Installer\LegendBarSetup.exe` as Administrator
- ☐ Follow the installer prompts
- ☐ Confirm desktop shortcut is created
- ☐ Launch LegendBar from the desktop shortcut

Step 7 — Test Features

- ☐ Bar appears at top of screen
- ☐ Auto-hide works (hover to show, move away to hide)
- ☐ Pin/unpin works
- ☐ Clock and date display correctly
- ☐ Settings popup opens and saves correctly
- ☐ Media controls work (play/pause, next, previous)
- ☐ Volume scroll works (hover media widget and scroll)
- ☐ Click title brings media app to focus
- ☐ Volume indicator appears and fades out
- ☐ Media widget fades out when no media playing
- ☐ Launch on startup toggle works (if tested)

Step 8 — Upload to GitHub

- ☐ Go to <https://github.com/Baldev8910/LegendBar/releases>
- ☐ Click **Draft a new release**
- ☐ Set tag to `v1.1.X.0`
- ☐ Set title to `LegendBar v1.1.X.0`
- ☐ Write release notes describing what changed
- ☐ Upload `F:\LegendBar\Installer\LegendBarSetup.exe`
- ☐ Click **Publish release**

Important Notes

Trimming must stay disabled — `<PublishTrimmed>False</PublishTrimmed>` in `.csproj`. Never re-enable this or NAudio volume/COM features will silently break in the installed version.

Always test the installed version — features that work in VS Debug/Release may not work in MSIX if the code isn't packaged correctly.

Certificate — the same `.pfx` certificate is reused across all versions. Never delete it.

DPI — only 100% display scale is supported on all monitors. Do not change this without testing.
